

First Time Configuration

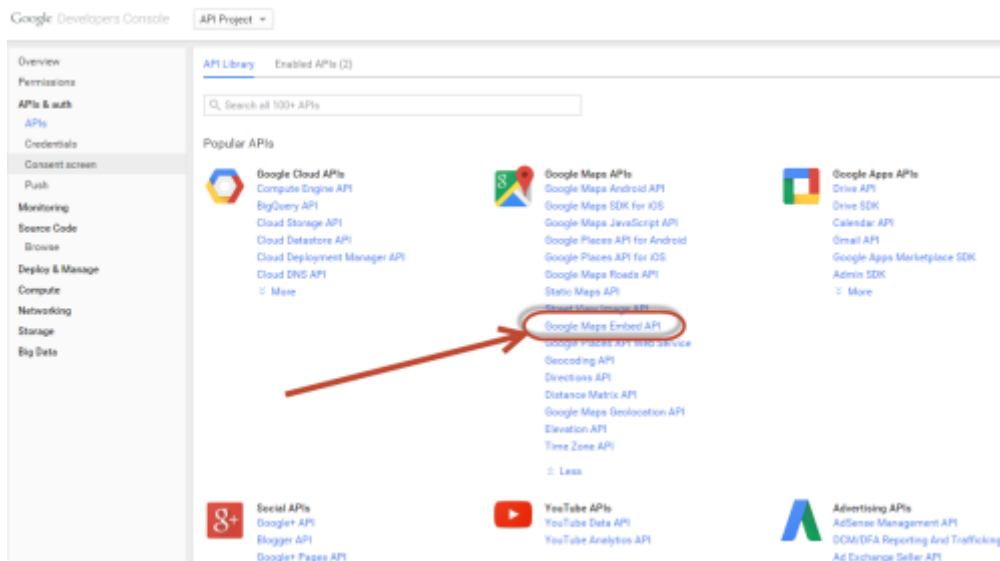

These are the instructions to follow in order to start using Google Maps on your site.

1. If you do not yet have a Google Maps API Key visit the Google APIs Console at <https://console.developers.google.com> and log in with your Google Account (or create a Google Account if you do not already have one). The instructions for the **Newest Google Developers Console View** (as of June 2015....this seems to change irregularly so let us know if it has) is included here.

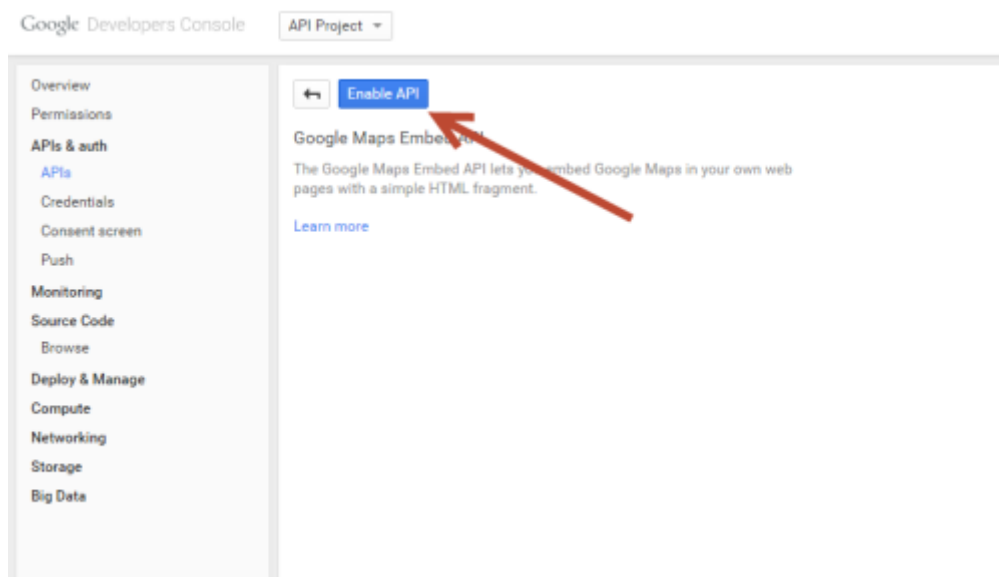

1. After logging into your Google Developers Console you should see something like the page below. Within that page you should click the "APIs" link in the left menu:

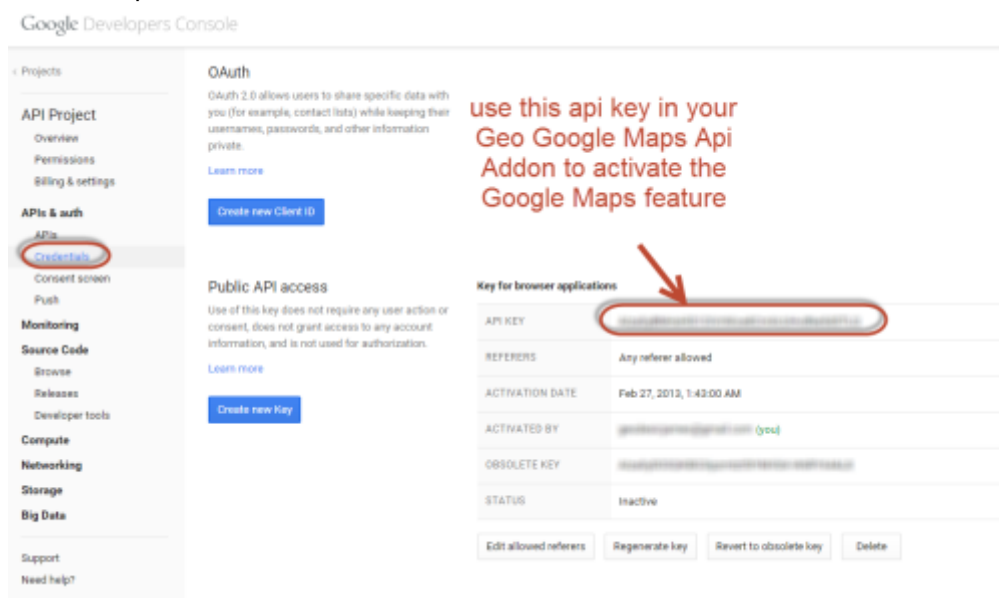

2. The next page you see should look like that below. Click the "Google Maps Embed API" link you see there.

3. That should take you to a page that looks like that below where you would click the "Enable an API" button you see in that Google "Project Dashboard" page

4. Once "on" you would go to the "Credentials" link in the "APIs & auth" section of the left hand menu. Many times you are asked the type of key to choose. Choose "browser key" if you do see this option. Use the API KEY shown there:

1. Install and enable the Google Maps addon if you have not already, following [Installation of Addons](#). <
2. In your admin panel, go to [Addons > Google Maps > Settings](#), and enter your Google Maps API key. Save the settings. <
3. Change the rest of the setting if you wish to change them from the defaults. <
4. At the bottom of that same page in your admin, after the settings have been saved, ensure that the Google Map Preview displays correctly in the [Maps Preview](#) section. If it does not, check the settings and that cURL is working on your server, if the map does not display here it will not display on listing details pages. <
5. [NOTE: in most cases, this step is done for you automatically] Add the tag **{addon author='geo_addons' addon='google_maps' tag='listing_map'}** to your classified details and/or auction details templates (generally, listing_classified.tpl or listing_auction.tpl). If not already present, you would insert this tag into these templates wherever you want the Google Map to appear.<
6. In [Listing Setup > Fields to Use](#) make sure to allow using the **Mapping Location** field

1. Place a test listing on your site, and be sure to enter the mapping data. Once the listing is placed, view the listing details to see if the map displays. <

<tip cn>Make sure you test/use this feature with an actual address that can be found by the Google Maps site. If the address is not valid, the window may never appear</tip>
