# Bridges

This is the primary page for administering the different Installation Bridges you might have set up.

## Current Bridge Installations

## Active

If this box is not checked, the installation will be skipped over when normal bridge installation activities happen, for instance when a new user registers, if the box is not checked the new user will not be created in that installation.

## Name

This is the name of the installation, specified by you. This is for your reference only. The bridge name will also be referenced in any "debug e-mails" sent, for instance if there was a problem when attempting to create a new user in the installation.

## Type

This is the bridge installation type, that is, what the software being bridged to is.

## Status

This is the current status of the bridge. Usually active or inactive.

## Test Installation

Use the "Test" button to run a series of tests specific to the bridge type, to make sure the settings you have entered are correct.

**Edit**

Allows you to edit the bridge's settings.

**Delete**

Allows you to delete a bridge installation.

# Sync Users

If you have any bridge installations that allow syncing existing users, you will be able to do so using this tool. Not all bridge installation types can sync users, and some can only sync users "one way" [1].

Just select the bridge installation you wish to sync from the drop-down.

# Installation Types

| Installation Type | Import Users *FROM* Bridge | Export Users *TO* Bridge | Create User | Edit User | User Login | User Logout |
|---|---|---|---|---|---|---|
| Phorum | -- | Yes | Yes | Yes | Yes | Yes |
| vBulletin | -- | Yes | Yes | Yes | Yes | Yes |
| Joomla | -- | Yes | Yes | Yes | Yes | Yes |
| Geo Software 3.1+ | Yes | Yes | Yes | Yes | Yes | Yes |

This section is for information purposes to show you what bridge types were found. You can click on the bridge installation type to view additional information about that particular type.
