

# Sync Users [S]

This tool allows you to sync (copy) any users from one installation to another. This feature depends on the bridge type, some bridge types are not able to copy users from or to the bridged installation. This is usually a limitation because of how the bridged installation *works*, for example if the password is stored in such a way that it cannot be retrieved, then copying the users will not be possible because the password cannot be copied.
