

Settings

This is the main settings page for the Pedigree Tree Addon.

Pedigree Tree Settings

Max # Generations

This is the maximum number of generations to collect during listing placement and listing edit. The "count" starts with the first Sire and Dam, so if a max # generations of 1 is entered, only the Sire and Dam will be collected.

Default Value: 3

Max Required Generations

This is the number of required generations that are required to be filled out before allowing the user to proceed. For instance, if it was set to 1 required generation, and 3 max generations, then there would be 3 generations collected but only the first one would be required. The 2nd and 3rd generation of the pedigree tree would not be required, the user could fill in or not fill in however many they desired.

Default Value: 3

Enable per Price Plan/Category

By default, collecting the pedigree tree information is enabled for all price plans and categories. You can use the shortcut links provided in this section, or to navigate to each price plan or category: go to the *price plan cost specifics* for a particular price plan or category, click *Configure* for the "PedigreeTreeInfo", then check/uncheck the box to enable/disable the pedigree tree for that price plan or category.
