

# Upload Set (s)

<tip c n>**Note:** The upload functionality requires the server to have **Zip support** installed for PHP.</tip>

To get the Clone Template Set dialog, in the admin go to:

[Design > Template Sets](#)

At the bottom of this page, below the list of template sets found on your site, will be a button for **Upload Template Set**. Clicking on this button will bring up a dialog that looks similar to the screen-shot below:

## Template Set zip file

Click *browse* to select the template set zip file to upload. This file might be a file that you downloaded from a template designer, or it can be a file that was previously downloaded when you use the [Download Template Set](#) button next to an existing template set.

## If template set exists?

Select which option you want if the template set you are uploading already exists on your site. Do you want to re-name the template set you are uploading (*rename uploaded set* option), or do you want to remove the old template set and replace it with the uploaded one (*Overwrite Existing Step* option)?

## Use set

Check the box if you wish to immediately activate the template set after it is uploaded.
