

Allowed HTML

Use this administration tool to declare HTML tags you do not wish to allow as an option on your site where users enter text. If the user attempts to enter a 'disallowed' tag, it will simply be removed with no replacement. The tags with an asterisk (*) are strongly recommended to be marked as 'disallowed'. This is because the potential for a user to enter malicious code exists with the tags we have identified with an asterisk.

Also note there may be **inadvertent** tags disallowed if you use the WYSIWYG within your place a listing process. The WYSIWYG does not have the ability to represent flash or dynamic content within it. So even if you allowed the <param>, <object>, ...etc tags to display this content within the WYSIWYG the WYSIWYG itself may remove the tags. The WYSIWYG seems to **correct** HTML according to what it can display. So if your clients want to use dynamic object tags within their description and you allow their use make sure those clients know they will need to use the textarea box to enter their content instead of the WYSIWYG.

This admin tool also allows you to enter tags into the system that are not currently in this admin tool. When you enter a tag you only need to enter the HTML tag **BETWEEN** the "<" and ">" part of the tag MINUS attributes. The "a" (HTML anchor) tag is already in the admin tool by default but if it hadn't been in the tool already you would have only needed to enter "a" into the tool even though the full HTML tag may look something like:

```
<a href="http://www.geodesicsolutions.com"> go to Geodesic Solutions website</a>
```

The script will automatically remove capitalized versions also.
