

# IP Banning

Use this utility to ban users from accessing your site who are connecting from a specific IP Address. Users from these IP Addresses may only view the front page of the site. If they attempt to view any other pages, the software will continue to only show them the front page.

You can place as many IPs as you wish. You can use partial IPs, but the software assumes you are leaving off the right-most octets (ex. 192.168 will be interpreted as 192.168.x.x).

<tip c n>You must supply 3 digits for any given octet, or else end the octet with a period for an exact match. For example, 10.0 would match 10.0.x.x AND 10.056.x.x, but 10.0. would only match 10.0.x.x  
</tip>
