

What Is GeoCore?

GeoCore is the new name for all Geodesic Solutions software packages beginning with version 7.0.0.

The products previously known as:

- GeoClassAuctions Enterprise
- GeoClassifieds Enterprise
- GeoClassifieds Premier
- GeoClassifieds Basic
- GeoAuctions Enterprise
- GeoAuctions Premier

are now unified into a single product.

Sites running GeoCore may use both Classifieds and Auctions, or may turn off one or the other as needed. Additional item types may be added in the future.

GeoCore allows much greater flexibility for you, the customer: many features previously available only in the Enterprise-level software packages have been opened up to everyone, either as built-in features or Add Ons that may be purchased separately. With GeoCore, you now have the power to build exactly the type of site you want: add the features you need, leave the ones you don't, and add more Add Ons to your site at any time!

GeoCore is the next step forward for Geodesic Solutions, and a powerful revolution in the field of Classifieds and Auctions software. Contact us today to find out how GeoCore can help you!
