Core Display

The **_Core_ Display** addon is responsible for displaying different content on various pages in the software. You should have this addon installed and enabled, unless you do not wish to use any of the newer things that it displays.

We will **not** be adding new "modules" to the software. Instead, we will create new addon tags inside the core display addon, for anything that is meant to be part of the main software.

This addon displays:

- Browsing Filters
- Featured Listings when Browsing [1]
- More in the future

[1）

The featured listing gallery that uses the simple carousel, displayed above listing results when browsing categories
