First Time Configuration

These are the instructions to follow in order to start using Google Maps on your site.

- If you do not yet have a Google Maps API Key visit the Google APIs Console at https://console.developers.google.com and log in with your Google Account (or create a Google Account if you do not already have one). The instructions for the Newest Google Developers Console View (as of June 2015....this seems to change irregularly so let us know if it has) is included here.
 - 1. After logging into your Google Developers Console you should see something like the page below. Within that page you should click the "APIs" link in the left menu:

Google Developers Console	API Project. *		Sign
Dentiere Persianiona Affa & anth	Project 10. spi project ALBAS278043 Project Number: ALBAS278043 Project Dashboard		
Dedentials Consent screen Push Monitoring Source Code	Take the App Depine quickwise! Learns 'Helin Work' for App Engine and depiny your first app to the oloud. Duration ~10 mondes. Try App Engine	Tale Ene Comparte Engine quickstant Eine Module and Managabili an Compute Engine to smatte a two-tier to-do list application. Burstann -15 monutes.	Learch click to deploy software Deploy popular open stacks on Goog ample form
Browse Drykry & Manage Campute Metworking Storage Big Data	Try BipDuery with apopulation data. Run queries approxil huge public data sets to see how BigDuery can help you analyze your own data.	Could a strange locket Brane your undexchard data solely and with high availability using Deople Good Brange	Boott your app with a Google API Une Google APIs with your app in he technologies
	Try BigDurry	Create bucket	Trable an API

2. The next page you see should look like that below. Click the "Google Maps Embed API" link you see there.

Overview	API Library Enabled APIs (2)		
Permissions			
Pie & auth	Q, Search all 100+ APIs		
APIs .			
Credentials	Popular APIs

	Blogger AP1	YouTube Analytics API	DCM/DFA Reporting And Traffi

3. That should take you to a page that looks like that below where you would click the "Enable an API" button you see in that Google "Project Dashboard" page

Google Developers Console	API Project 💌
Overview Permissions APIs & auth APIs Credentials Consent acreen Push Monitoring Source Code Browse Deploy & Manage Compute Networking Storage Big Data	Enable API Google Maps Embed API lets you embed Google Maps in your own web pages with a simple HTML fragment. Learn more

4. Once "on" you would go to the "Credentials" link in the "APIs & auth" section of the left hand menu. Many times you are asked the type of key to choose. Choose "browser key" if you do see this option. Use the API KEY shown there:

- Install and enable the Google Maps addon if you have not already, following Installation of Addons. <
- In your admin panel, go to Addons > Google Maps > Settings, and enter your Google Maps API key. Save the settings. <
- 3. Change the rest of the setting if you wish to change them from the defaults. <
- 4. At the bottom of that same page in your admin, after the settings have been saved, ensure that the Google Map Preview displays correctly in the Maps Preview section. If it does not, check the settings and that cURL is working on your server, if the map does not display here it will not display on listing details pages. <</p>
- 5. [NOTE: in most cases, this step is done for you automatically] Add the tag **{addon** author='geo_addons' addon='google_maps' tag='listing_map'} to your classified details and/or auction details templates (generally, listing_classified.tpl or listing_auction.tpl). If not already present, you would insert this tag into these templates wherever you want the Google Map to appear.
- 6. In Listing Setup > Fields to Use make sure to allow using the Mapping Location field

<

1. Place a test listing on your site, and be sure to enter the mapping data. Once the listing is placed, view the listing details to see if the map displays. <

<tip cn>Make sure you test/use this feature with an actual address that can be found by the Google Maps site. If the address is not valid, the window may never appear</tip>
