

Google Maps

This addon allows displaying a Google map on the listing details page using the mapping fields on the listing.

To use this addon, you will need the requirements noted below, and be sure to follow the installation instructions which are slightly different than normal.

Requirements

The following requirements are needed to use this Addon:

- cURL enabled on the server. This is needed to communicate with Google in order to get the coordinates for a mapping location. Google Maps addon will not work without cURL on your server.
- A Google Maps API key obtained specifically for your site, which you can [sign up for on Google](#).
