Installation

These are the general installation instructions that work for most Geo Addons. Also be sure to read any instructions specific to the addon you are installing, if such instructions exist.

1. Log in to your Client Area on the http://geodesicsolutions.com website.
2. Each Addon is associated with a Product Order. Therefore, click on the "View" link for the Product associated with the Addon. You should then see the Addon at the bottom of the page available to download.
3. Download & un-zip (extract) the Addon package to a location on your PC's hard drive. The unzipped folder should contain additional folder(s) and file(s).
4. Using an FTP client, upload the addon's main folder to the **addons/** directory on your site, located at the *root* of your software install. For example, when you FTP into your site on the server, browse to the location on your server where the rest of the Geodesic software is located and find the **addons/** directory.
5. Log in to the admin panel for your software, and go to Addons > Manage Addons.
6. Look in the list *Not Installed Addons* for the addon you just uploaded. If you do not see the addon in the list, ensure that you have uploaded the files to the proper location.
7. Click on *Install* next to the addon. If it installs correctly, the addon will move to the *Disabled Addons* list.
8. Click on *Enable* next to the addon. The addon should now be installed & enabled.
9. Be sure to follow any additional instructions specific to the addon.
