2025/11/17 07:57 1/1 Edit Feedback Increments

## **Edit Feedback Increments**

## Icon / URL

You have the ability to implement up to 10 rating levels. Each level can have its own icon associated with it. The default GeoProduct has colored 'stars' associated with each level. So, when a user's rating falls into a particular level, the icon (star) associated with that level displays next to their name on the Listing Display Page. You can implement your own 'icons' by entering the URL for your icons into the provided text area.

Make sure you enter the url of the icon so that it can display on the client side of the site not just the admin side. We suggest using a relative url like:

images/feedback/star ltblue2.gif

where the icon would be in the "images/feedback/" directory/folder of the website. Leaving the slash off the front of the url makes sure the browser proceeds from the root domain of the site making the icon viewable in the admin and on the client side.

## Minimum / Maximum Score

Each level allows you to establish the minimum and maximum score that a user needs to have in order to qualify for that level. Simply set up your increments so that they increase from one level to the next. Ensure that each level's values do not overlap the next level's values. Please put these in numerical order from lowest value to highest for optimal performance. When you reach the last level that you want to use, instead of specifying a 'max value', instead click the "and up" checkbox.

<tip c n>NOTE: To delete or not use a level, simply leave all fields corresponding to it blank.</tip>

<tip c n>NOTE:You do not need to use all ten icon "levels". On your last level just make sure to use
the "and up" checkbox so the script will not look for more feedback brackets after that one.</tip>
