

Languages

Admin Menu Category: **Languages**

For more information, see the sub-pages of this admin menu category.

Editing Language Specific Features Within the System

Once you create a new/another language within this admin tool the script will automatically create language specific editable text throughout the system. Some of the features that have language specific text/functionality are listed below:

- Language specific text on every page within the system
- Language specific text with most modules within the system.
- Category name
- Category descriptions
- You will need to create language specific pre-valued dropdowns within the system and assign these dropdowns to the specific language of each category and site wide optional field that uses one
- Language specific listing durations
- Make sure you create language specific page templates (Enterprise edition only)
- Make sure you assign those language specific page templates to all your page within the system
- If you have multiple languages in use on the site at one time make sure you have a way on the client side for the client to choose the language they wish to view the site in
