

# Misc. Display

This section is reserved for miscellaneous modules that are used to display data on your site.

## Hottest Listings Module

This module produces a table which displays the results of the **most viewed** listings on your site. You can specify the number of listings that will be displayed in the table, as well as, columns to be used.

The **number of times viewed** counts are what determines which listings are displayed on this list. This value is not reset when a classified is renewed. This value can also be manipulated by the seller to inflate the **viewed count** value. It will take a bit of vigilance on the administrator's to make sure this value isn't manipulated to keep a specific listing in the hottest listing display module.
