Newest

These modules allow you to display a table of the most recent listings placed within the current category. They will most likely be used when you have turned off the standard �newest listings� table display that is associated with the MAINBODY tag as specified in the SITE SETUP > BROWSING menu.

Newest Listings 1

This module allows you to display a table of all of site's newest (most recently placed) listings. You can specify the which columns are turned on and off, as well as, background colors, fonts, thumbnail image size, and camera icon if you do not want to display thumbnail images. This is a category specific module, meaning, it will only display results for the category it is used in. For example, if it is used in the template assigned to the front page of your site, then results will be displayed from your entire site's categories. If it is also used in the template assigned to your categories, it will only display results specific to the category being browsed by the visitor.

Newest Listings 2

This module is identical to the previous module, except it gives you the ability to display the same information in a different way by changing up the settings.
