Paypal [S]

Paypal Setup Instructions

To set up PayPal as a payment option for use with this software follow the steps below:

- 1. Log in to your Business or Premier PayPal account. You must have a Business or Premier account with PayPal to accept payments through PayPal.
- 2. Go to the 'Profile' subtab.
- 3. Click on the 'Instant Payment Notification Preferences' link in the 'Selling Preferences' column.
- 4. Click Edit.
- 5. Check the box and enter the URL for your site. The URL set here is used as the "default" URL to receive the *IPN Signal*. It needs to be filled out, but it is actually not used by the Geo software, because the software tells Paypal a specific IPN Url to use that over-writes this setting. You do need to make sure that the field is not left blank, however.
- 6. Click Save
- 7. In your Geo admin panel, enable the gateway, and click "configure" to make sure the settings are set correctly (see below for the explanation of each setting)
