Paypal [S]

Paypal Setup Instructions

To set up PayPal as a payment option for use with this software follow the steps below:

1. Log in to your Business or Premier PayPal account. You must have a Business or Premier account with PayPal to accept payments through PayPal.
2. Go to the 'Profile' subtab.
3. Click on the 'Instant Payment Notification Preferences' link in the 'Selling Preferences' column.
4. Click Edit.
5. Check the box and enter the URL for your site. The URL set here is used as the "default" URL to receive the *IPN Signal*. It needs to be filled out, but it is actually not used by the Geo software, because the software tells Paypal a specific IPN Url to use that over-writes this setting. You do need to make sure that the field is not left blank, however.
6. Click Save
7. In your Geo admin panel, enable the gateway, and click "configure" to make sure the settings are set correctly (see below for the explanation of each setting)
