

Custom JS Plugins

The software comes with several JavaScript (JS) plugins to do specific things in the software. Most are used by built-in functionality, but are made in such a way so that they can be re-used for your own purposes. In addition, many have optional parameters that can be customized to alter how the JS plugin works, for instance if you want to make the delay for the simple carousel longer.

You can find each custom jQuery plugin below along with notes on what customizations can be done with it. All customizations documented on this page are possible with no changes to the original JS files.
