Wizard Installation Instructions

WORK IN PROGRESS – Do not follow these instructions, we're in the middle of modifying them so they will **not be accurate**!

These are the installation instructions for those that wish to install the software using the wizard.

We recommend using this installation method over the alternate Zip package installation.

This method uses an *executable wizard* that you run from your *home* computer. Note that the wizard executable package (which will end in *.exe*) is meant to be executed "locally", you do **not** upload the entire file to your site.

Using the wizard package to install the software is more simple and easy compared to the Zip package, as using the wizard combines steps 3-5.

1. Create new MySQL database on your server. <
2. Download the fresh install wizard package from the Client area. The file should end in **.exe**, and the download will be labeled something similar to:

FULL INSTALL - WIZARD - CA - Version ### <

1. Edit the **config.php** file located wherever you unzipped the software to, and change the database settings. Use the settings for the database you created in step 1. <
2. FTP all the files to your server where you want them to be installed. When uploading the files, use **BINARY MODE** for the following 2 files or they will be corrupted:
   - **classes/php5_classes/products.zend.php** <
   - **classes/php5_classes/DataAccess.class.zend.php** <

If in doubt, you can upload all the files in BINARY MODE if you wish. <

1. Run the web-based installation script located at **setup/index.php** using your favorite Internet browser. For example, if your site was *example.com*, you would run *example.com/setup/index.php* in your browser. It will guide you through all the steps. <
2. Once you have completed the setup script, follow the link on the last page to the admin panel and log into the admin for the first time. The admin user/pass will be set to the default of "admin", and "geodesic", respectfully. <
3. When you log in for the first time, you will need to enter your license key. <
4. The software should now be installed. Enjoy! <
