

Corrupted Pages

A while back, the original company had a drive failure. Most of the wiki was recovered, but some of the files were corrupted.

We found that you can find them on wayback! So for each one, you would try to find the old version on wayback, and copy over the old contents.

These are pages that do not have a title in them. That was the only way I could figure out how to find "corrupted" ones since the corrupted ones are well, corrupted, and are missing the actual text contents.

Some may just be redirect pages. But if it is empty, chances are it got corrupted.

List of "possibly" corrupted pages

Note: the way I found these, was to do a file search for any that did not have a title (with `====`) in them. So a lot of them are not corrupted, they are just pages saying "this page moved..." .

If you find one just says "page moved ..." and is not blank, remove it from the list.

If the page itself is totally blank, find it on wayback. I've automated 2 different variations on the wiki link used over the years to look it up on wayback. Try the first one first, it will likely be more up to date if it is found. Try second one next if first one finds nothing.
